範例3_1Firebase_realtime_dataBase範例說明1

學習目地

- 建立Firebase DataBase
- 上傳大量List的方法
- 使用UITableView顯示多個Section

讀取plist的資料,並將plist資料上傳。

載入Firebase module並在在AppDelegate 建立Firebase 初始化, 在func application(_:, didFinishLaunchingWithOptions:),加入Firebase初始化

```
import Firebase
FirebaseApp.configure();
```

在AppDelegate的func application(_:, didFinishLaunchingWithOptions:)檢查Firebase 資料庫節點是否有資料。

建立自訂Function uploadDataToFirebase(usernameRef,plistName),負責下傳資料

```
func uploadDataToFirebase(usernameRef:DatabaseReference,plistName:String)
{
    }
```

建立plist檔案名常數

let fileName = "sortednames.plist";

當檢查沒資料時,呼叫自訂function uploadDataToFirebase(usernameRef:,plistName:)

self.uploadDataToFirebase(usernameRef: usernameRef, plistName: self.fileName);

self.uploadDataToFirebase(usernameRef: usernameRef, plistName: self.fileName);
